

Curriculum Intent: Science

“

Science is not just taught here, it is lived. Pupils are challenged to think about concepts, make bold predictions and plan and develop experiments which embolden their understanding of our world. Our teachers try to provide the resources and expertise to allow young scientific minds to flourish and our expansive school grounds allow students to experience nature first hand.

”

At Kingham, our aim is to support children in developing an understanding of the world around them through science.

Our approach to the curriculum encourages pupils to have enquiring minds, develop scientific skills and deepen their knowledge in areas such as living things, light and sound, and materials, which they will revisit throughout their time at Kingham.

Our curriculum aims to develop scientific skills, promote scientific knowledge, and encourage an enquiring mind in all our students. We believe that Science is vital to the world's future prosperity and so we provide an exciting range and depth of experiences and ensure that there is a progression of scientific skills as students move through the school.

Science is not just taught here, it is lived. Pupils are challenged to think about concepts, make bold predictions and plan and develop experiments which embolden their understanding of our world. Our teachers try to provide the resources and expertise to allow young scientific minds to flourish and our expansive school grounds allow students to experience nature first hand.
